SOLUTION

01

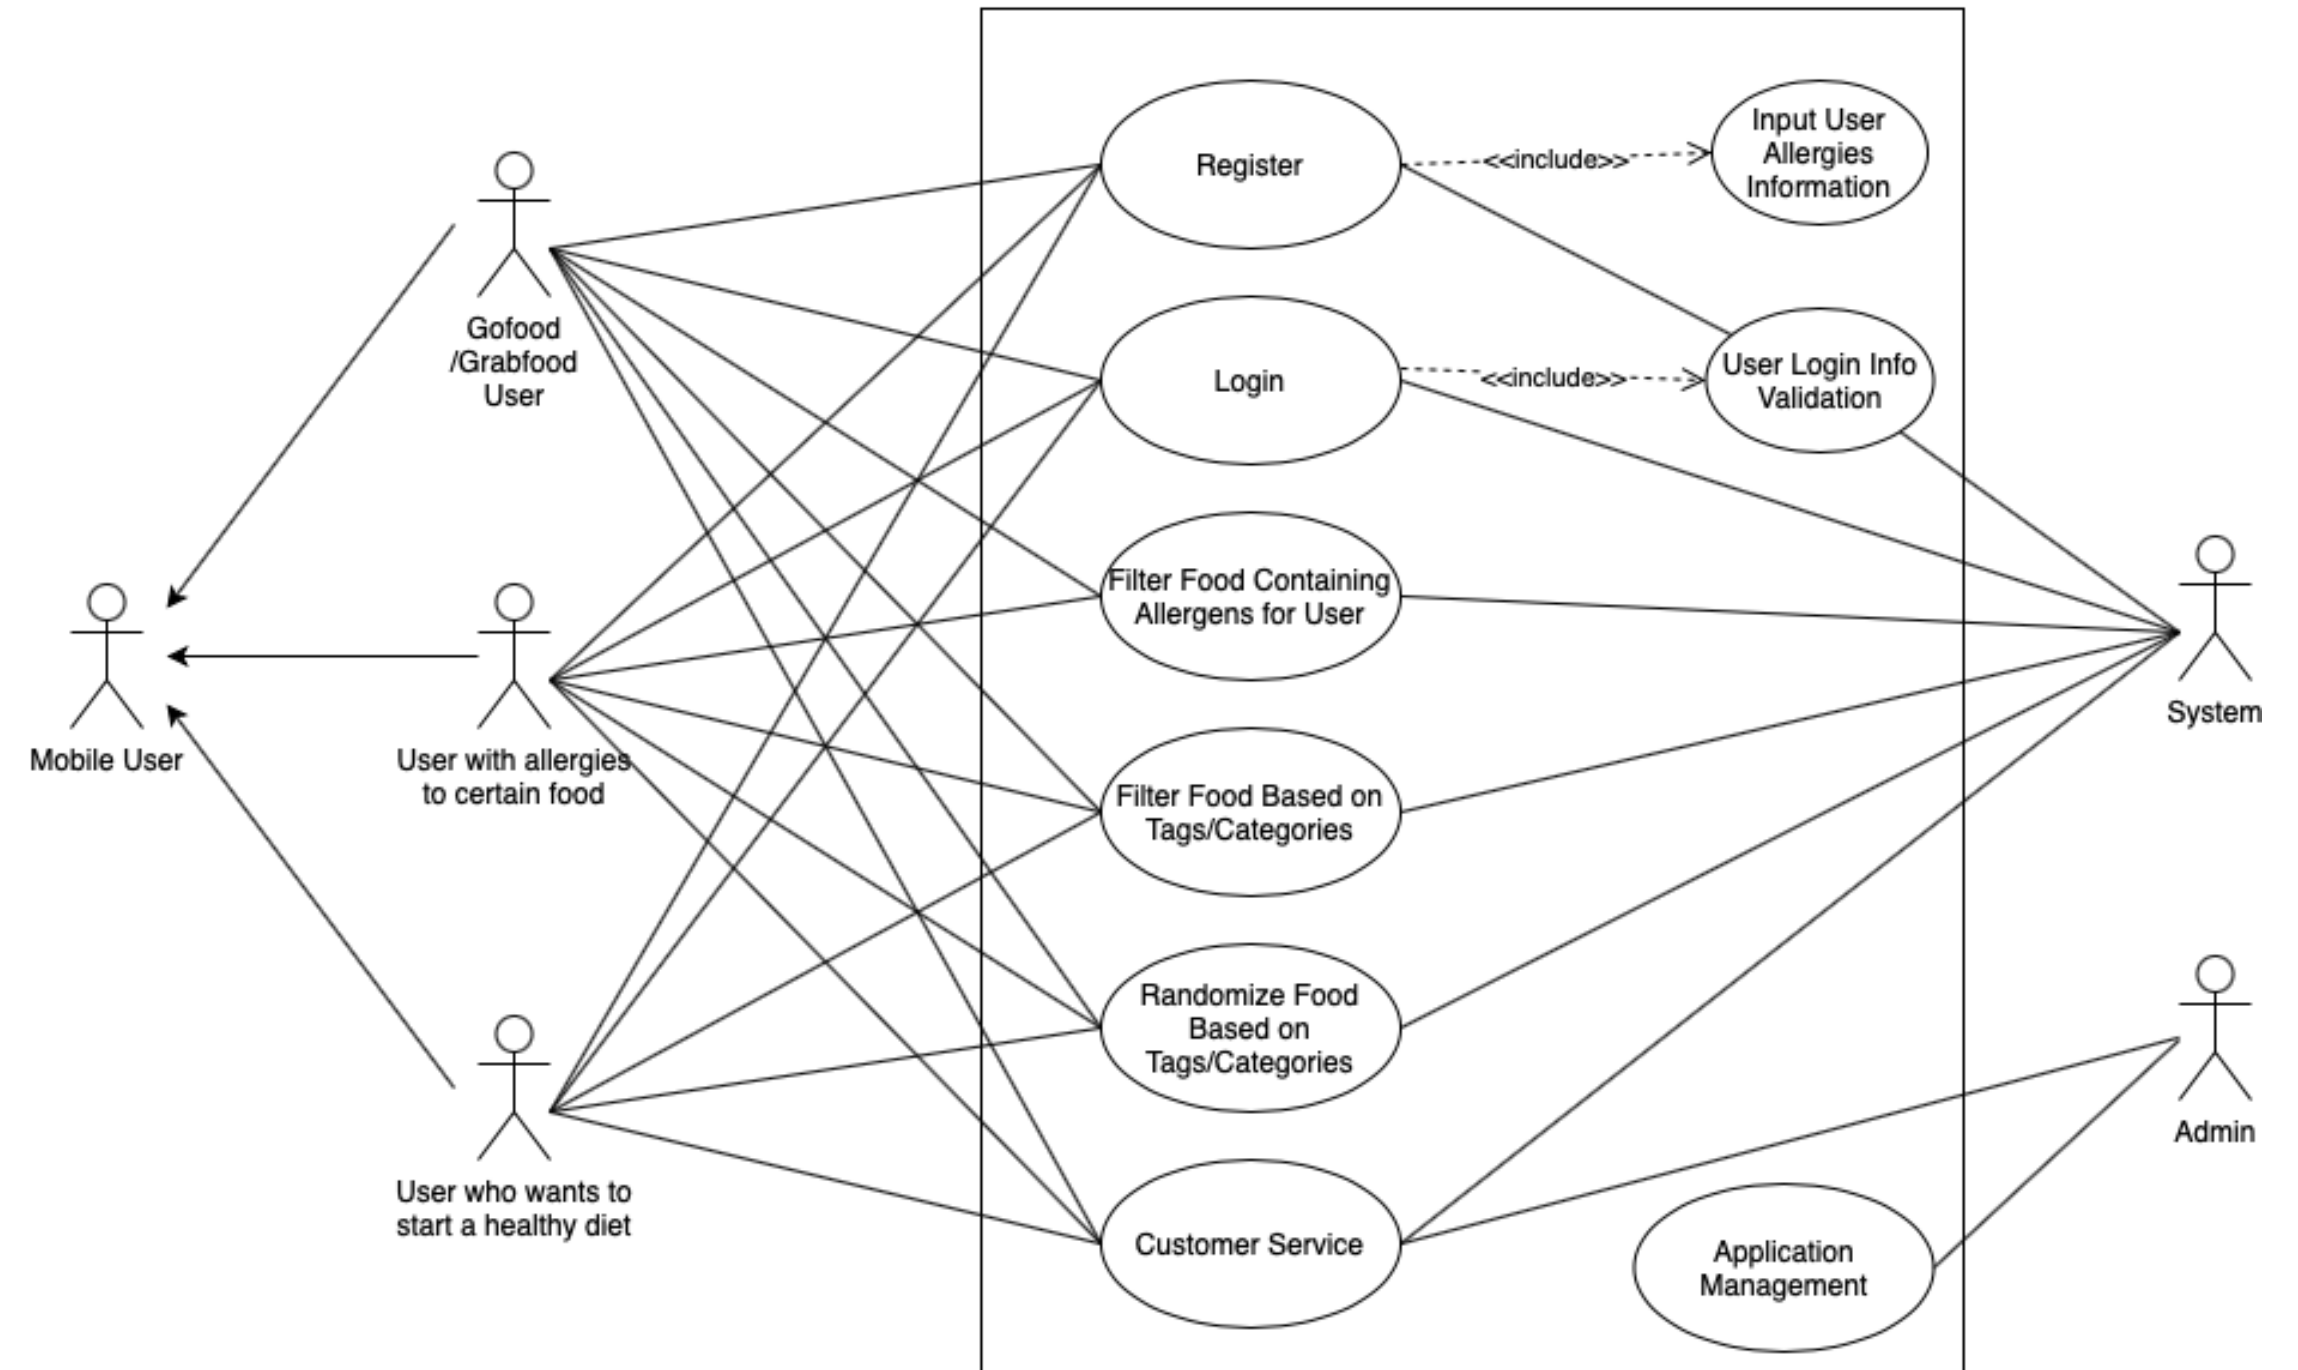

A feature to randomize food within the tags and categories the user inputted.

02

An application which lists food according to tags and categories inputted by the user.

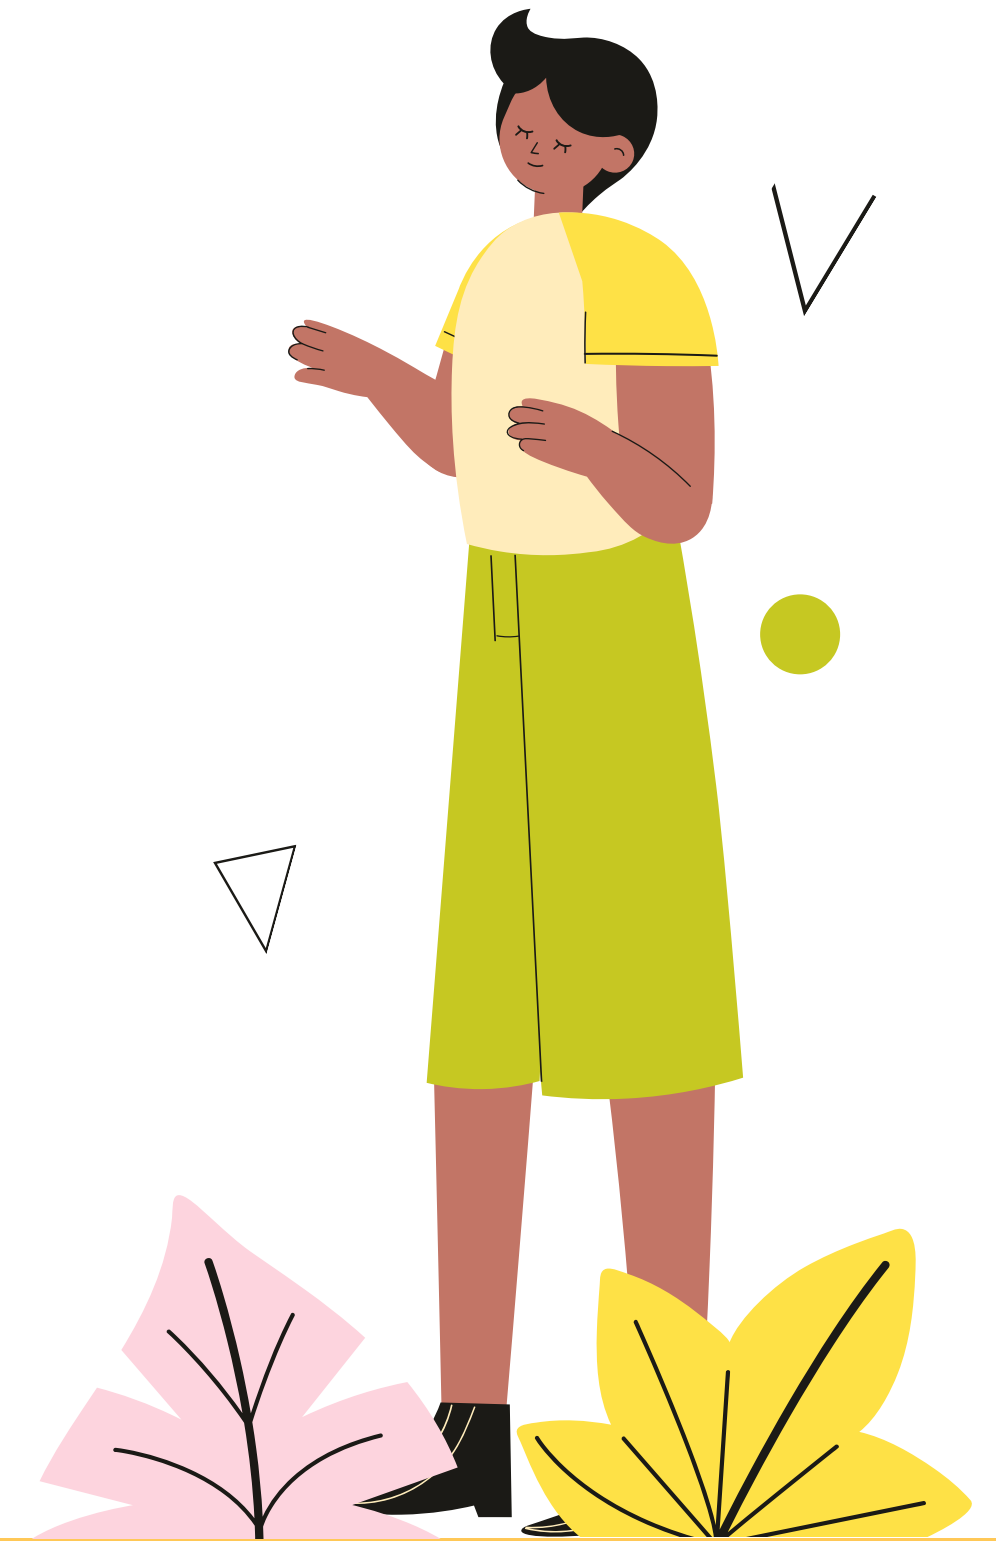

USE CASE DIAGRAM

RELIABILITY

Food Picker uses a filtering method to provide the right choice of food for the user according to the user's wishes. This application will help us in determining food when confused about what to eat. The food picker has good data integrity and there are no errors/bugs that annoy users.

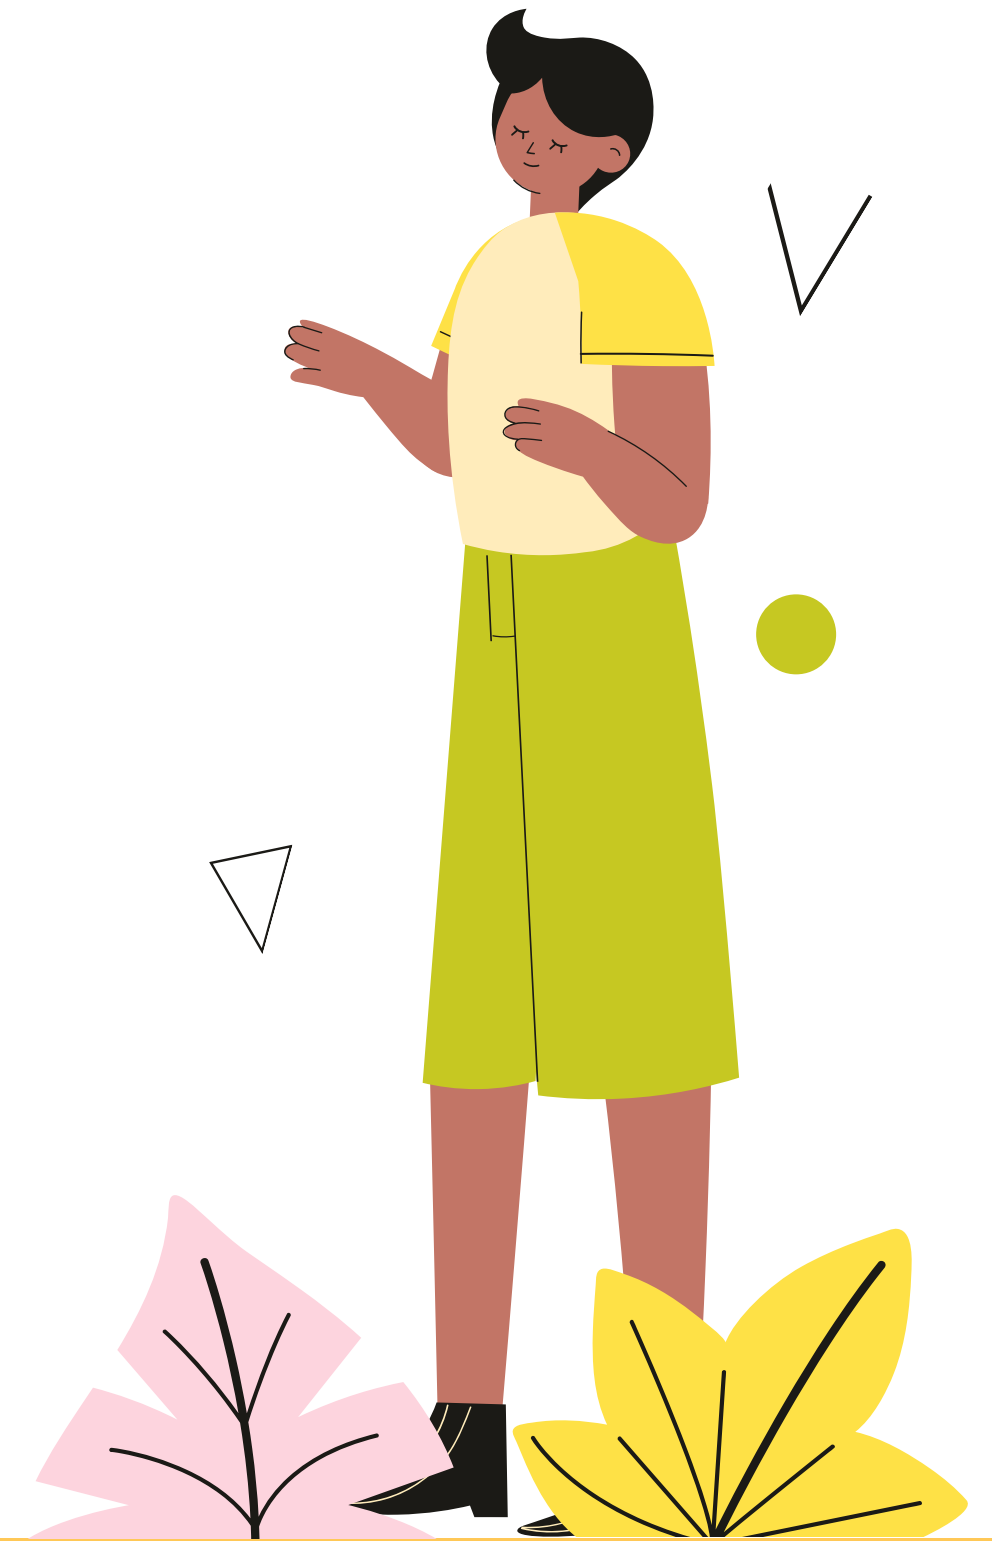

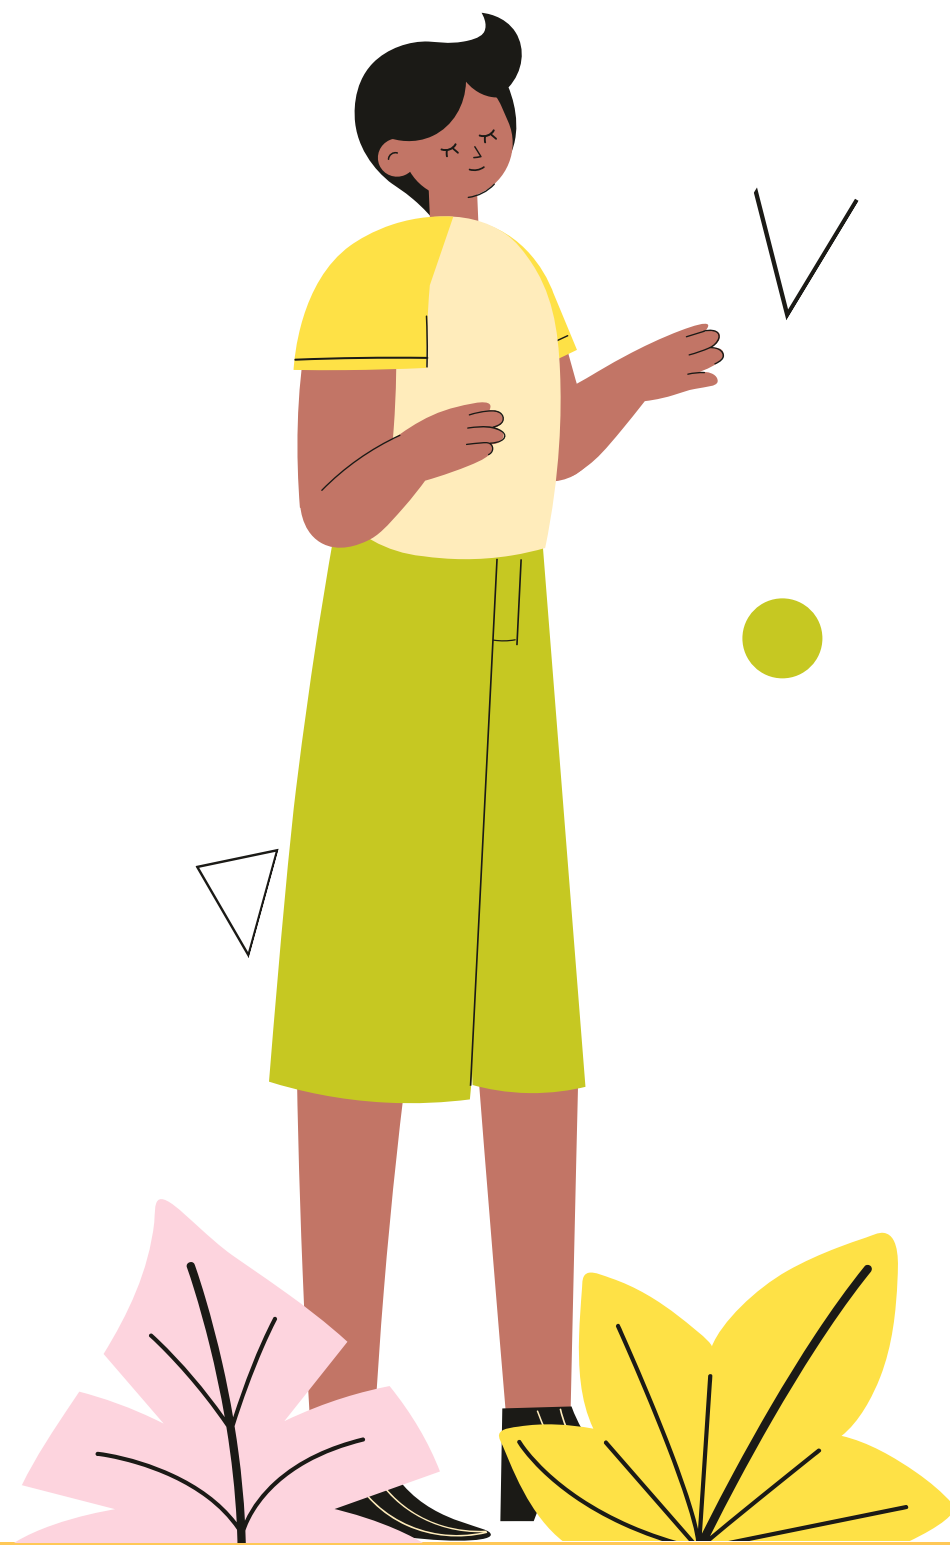

PERFOMANCE

Food Picker is an application that provides food recommendation features according to the tags or categories desired by the user. Where, users search for food and filter according to their needs. Then, the Food Picker will provide a suitable choice of food for the user. Recommendations will be displayed in the form of the name of the food and a picture of the food.

DURABILITY

This Food Picker will be very useful in the present and in the future. Where, not only helping ordinary people. The application will be able to be changed, improved, and added more features in the future, this application will be useful and help many people in this world.

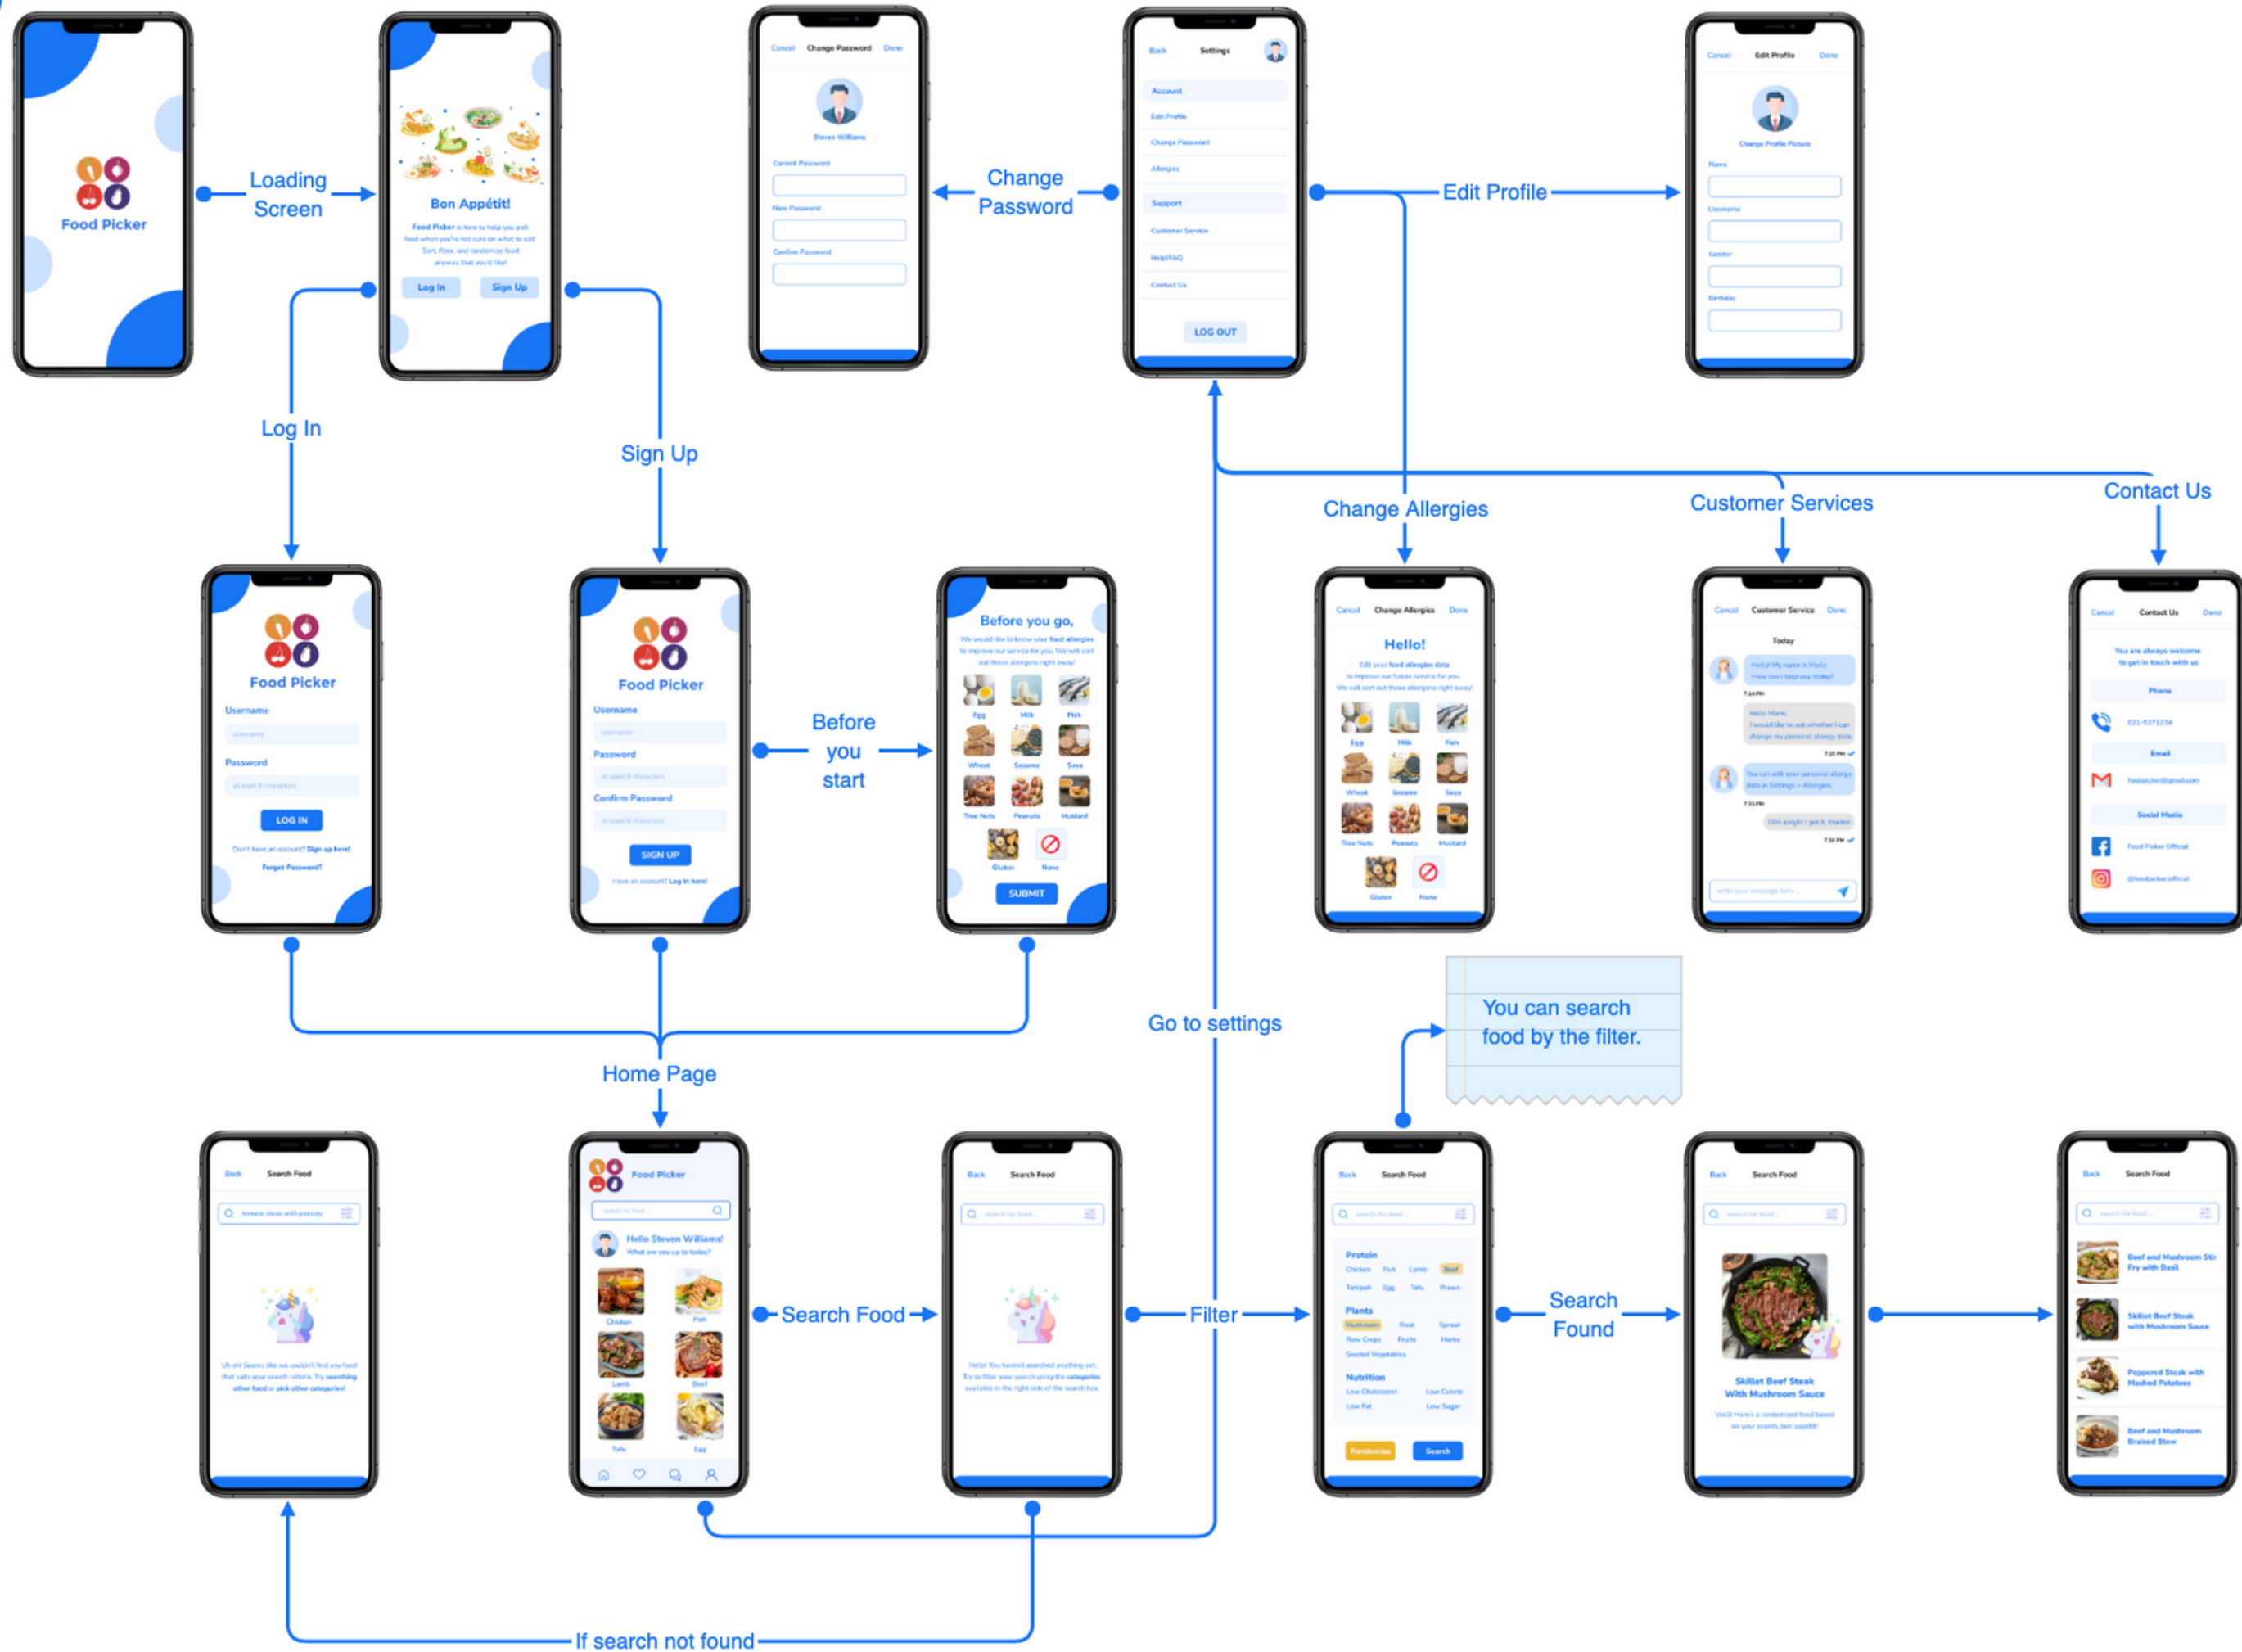

AESTHETICS

Food picker has an attractive user interface which is designed in such a way with a modern look that will make users comfortable in using the application.
